## PROJECTS

---

- |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2023 - 2024 | <b>AI Research, German Research Center for Artificial Intelligence</b> <ul style="list-style-type: none"><li>• Trained LLMs on large-scale GPU clusters</li><li>• Improved reward models for Reinforcement Learning from Human Feedback (RLHF) by extending existing datasets using weak supervision</li><li>• <b>Peer-reviewed IEEE publication:</b> “Language Modeling with Reinforcement Learning from Human Feedback with Weak Supervision” (<a href="#">IEEE</a>, <a href="#">ArXiv</a>)</li></ul> |
| 2025        | <b>Research Tool, Daimler Center for Automotive IT Innovations</b> <ul style="list-style-type: none"><li>• Built an interactive map tool, as part of the course “Automated and connected driving”, to visualize digital grid systems for organizing geographic information</li></ul>                                                                                                                                                                                                                    |

## WORK EXPERIENCE

---

- |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026        | <b>Visiting Forward Deployed AI Engineer, Boston Consulting Group</b> <ul style="list-style-type: none"><li>• Developed an end-to-end AI voice-agent platform for a telecommunications client, contributing across frontend, backend, LLM orchestration, and infrastructure</li><li>• Built an agentic runtime from the ground up, enabling organizations to register, automate, and execute autonomous agents for downstream applications</li></ul> |
| 2023 - 2024 | <b>Teaching Assistant, Technical University Berlin</b> <ul style="list-style-type: none"><li>• Supervised small classes, ran exercise sessions and supported organization for the courses “Media Project” and “Algorithms and Data Structures”</li></ul>                                                                                                                                                                                             |
| 2021 - 2023 | <b>Full Stack Web Developer, smart medication eHealth GmbH</b> <ul style="list-style-type: none"><li>• Developed healthcare web applications with stringent data privacy standards for pharmaceutical companies and doctors</li></ul>                                                                                                                                                                                                                |

## EDUCATION

---

- |                |                                                                                                                                                                                                                                                                                                                                                     |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2024 - present | <b>Technical University Berlin</b> <i>MSc Computer Science</i> <ul style="list-style-type: none"><li>• Focus: Cognitive Systems and Machine Learning</li></ul>                                                                                                                                                                                      |
| 2025 - 2026    | <b>University of Ljubljana, Slovenia</b> <i>Erasmus+ Program</i> <ul style="list-style-type: none"><li>• Focus: Bioinformatics and Computational Genomics</li></ul>                                                                                                                                                                                 |
| 2020 - 2024    | <b>Technical University Berlin</b> <i>BSc Computer Science and Digital Media</i> <ul style="list-style-type: none"><li>• Awarded for exceptional academic performance as a top graduate in 2023/2024</li><li>• Relevant coursework includes Cognitive Algorithms (ML), Algorithms and Data Structures, and Partial Differential Equations</li></ul> |

## SKILLS & INTERESTS

---

- |              |                                                                         |
|--------------|-------------------------------------------------------------------------|
| Languages    | German (native), English (C1), French (A2)                              |
| Technologies | Python, PyTorch, Java, C/C++, Javascript, Docker, Linux, vim, tmux, git |
| Interests    | Video and Film Production, Basketball, Climbing, Game Theory            |
